

Health and Wellbeing Event

20th of March 2018

Evaluation Report

This report will look at the outcomes of a Health and Wellbeing (HWB) Event by University Hospitals of Morecambe Bay.

The Forum in Barrow-In-Furness was selected as the location for the first HWB Event in the Furness area. When trying to identify an appropriate venue a thorough options appraisal was carried out against a range of venues in the area. The questions within the appraisal were carefully selected and a weighted scoring system was applied against the answers. The venue with the highest score was The Forum and so the afternoon of 20th of March 2018 was chosen as the appropriate date and time.

Invitation letters were sent out to people who had completed treatment within the previous 3 - 12 months and the specialist nurses promoted the event in their clinics. Posters were placed in hospital oncology waiting areas and local cancer charities promoted the event as well.

On the day of the event 54 people living with and beyond cancer attended the event as well as 18 carers, family members and friends, making a total of 72 people in attendance. There were also representatives from 13 services and support groups from across South Cumbria.

Upon arrival, everybody signed in and received an information pack containing a guide about the support services, Macmillan post-treatment information booklets and contact details for Macmillan helpline. Everyone then had opportunity to browse the information stands, talk to stall holders and each other, enjoy refreshments, network and listen to presentations.

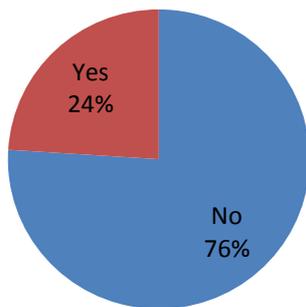

The decision was made to invite evaluation comments from patients, carers and friends and family. We had a 57% response rate.

Demographic Data

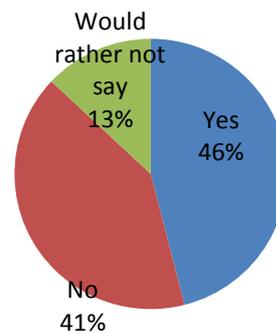

As part of the evaluation data that we collected from patients, carers and family and friends, we collected a number of different demographic data. By collecting this data, we found that of those attended 35% were male and 65% were female. Out of those attended only 11% was from the 20 - 49 year old age category. Therefore 89% of the attendees were 50 – 99 years old. Also 100% of attendees identified themselves as White British.

Other demographic data that we collected included:

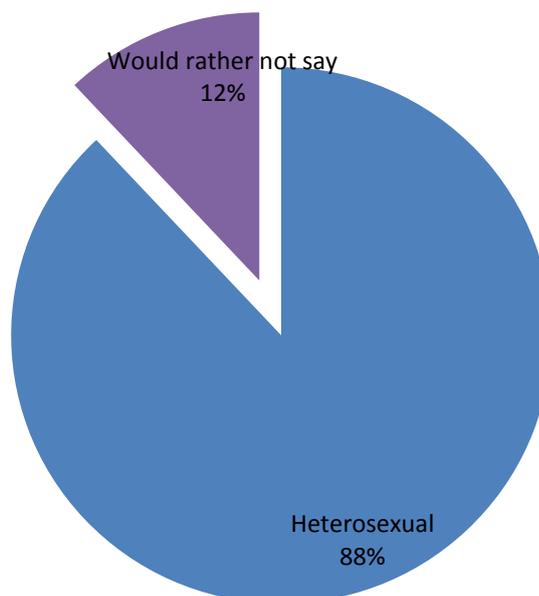

Percentage of those with a Disability

Percentage of those with a Religious Belief

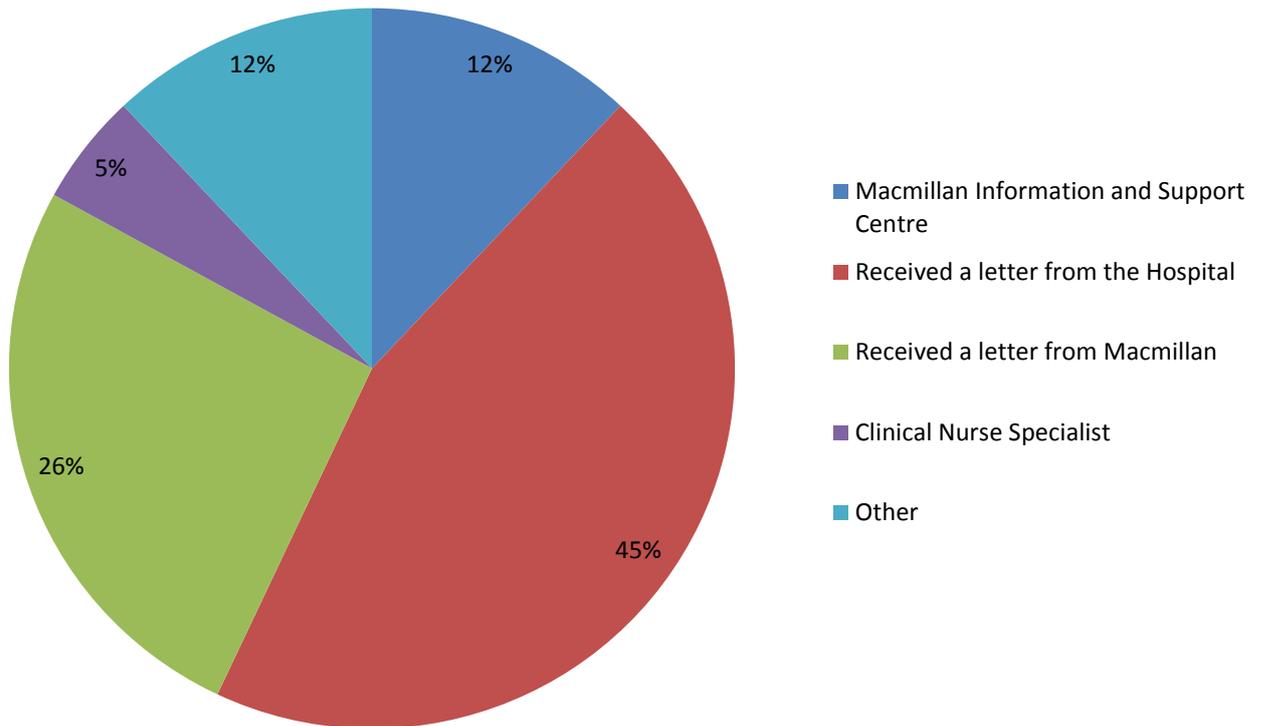

Percentage of Sexual Orientation

Evaluation questionnaire

How did you hear about the Health and Wellbeing Event

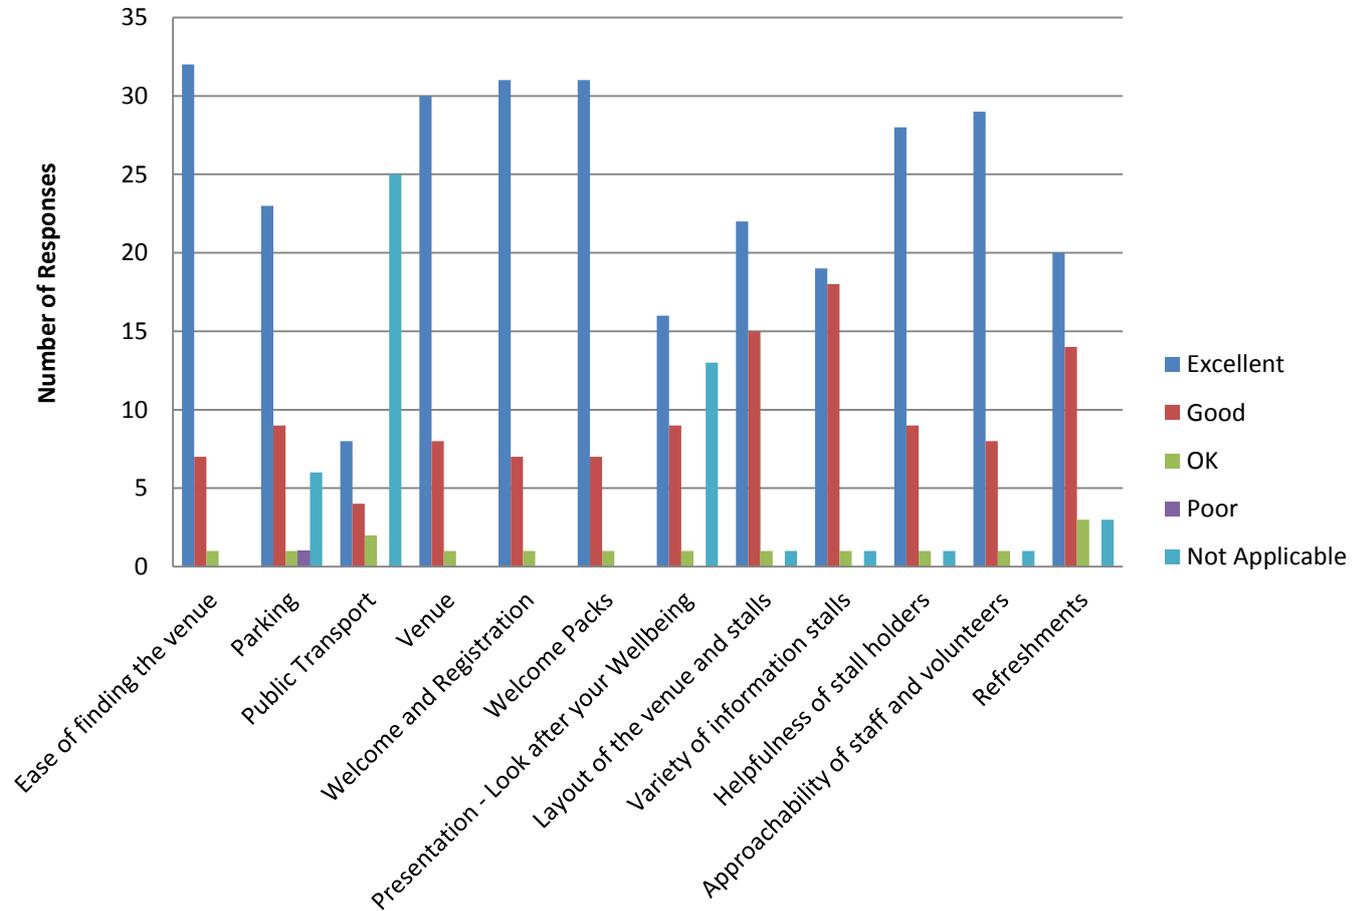

This question was asked to people to try and identify the most effective invite method. The invitation letters that were posted out were branded with the trust logo as well as the Macmillan logo. This means that those who stated that they received a letter from the hospital and those that received a letter from Macmillan actually received the same letter.

Of those that selected 'other', two third of people were made aware of the event from local cancer charities and support groups and a third came with someone who had received a letter.

Therefore, **71 %** of people heard about the HWB event from a letter of invitation.

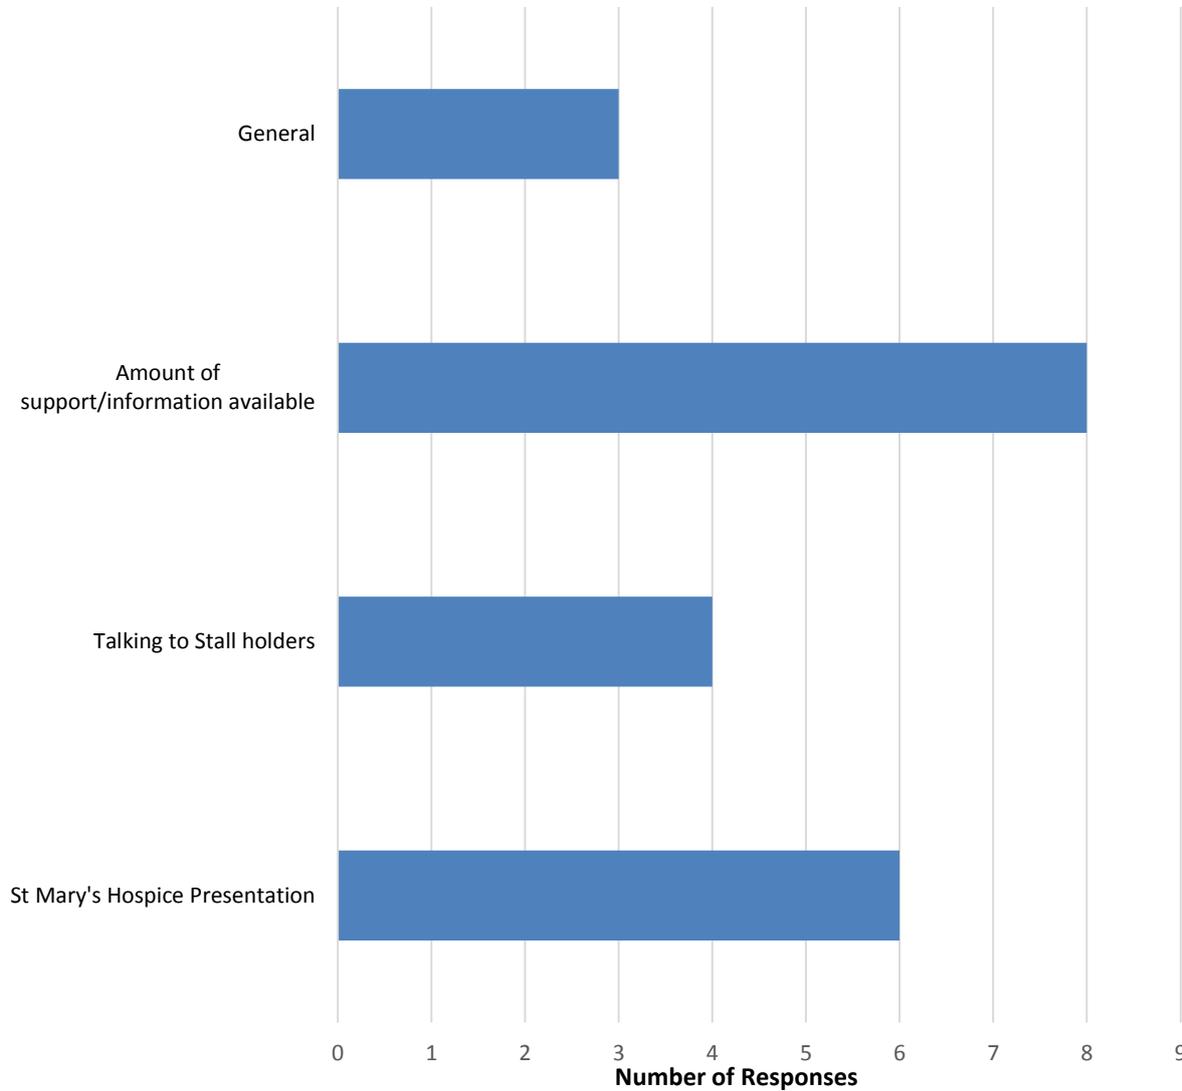

Only 2 people responded saying they had been signposted to the event from their CNS.

Ratings on various aspects of Health and Wellbeing Event

The attendees rated the Health and Wellbeing Event on various aspects. These included ease of finding the venue, venue itself, welcome and registration, presentations, layout of event, helpfulness of stall holders and approachability of staff and volunteers. The attendees rated the event excellent in most aspects. 80% rated ease of finding the venue as excellent and 18% as very good. The venue was rated excellent by 77% of attendees and very good by 21%. Welcome and Registration was rated as excellent or very good by 97% of attendees. The presentations by St Mary's Hospice Living Well presentation were rated as excellent or very good by 41% and 23% respectively. The helpfulness of stall holders was rated as excellent by 72% of attendees and very good by 23%. 95% of attendees who completed the evaluation form rated the approachability of staff and volunteers as excellent or very good.

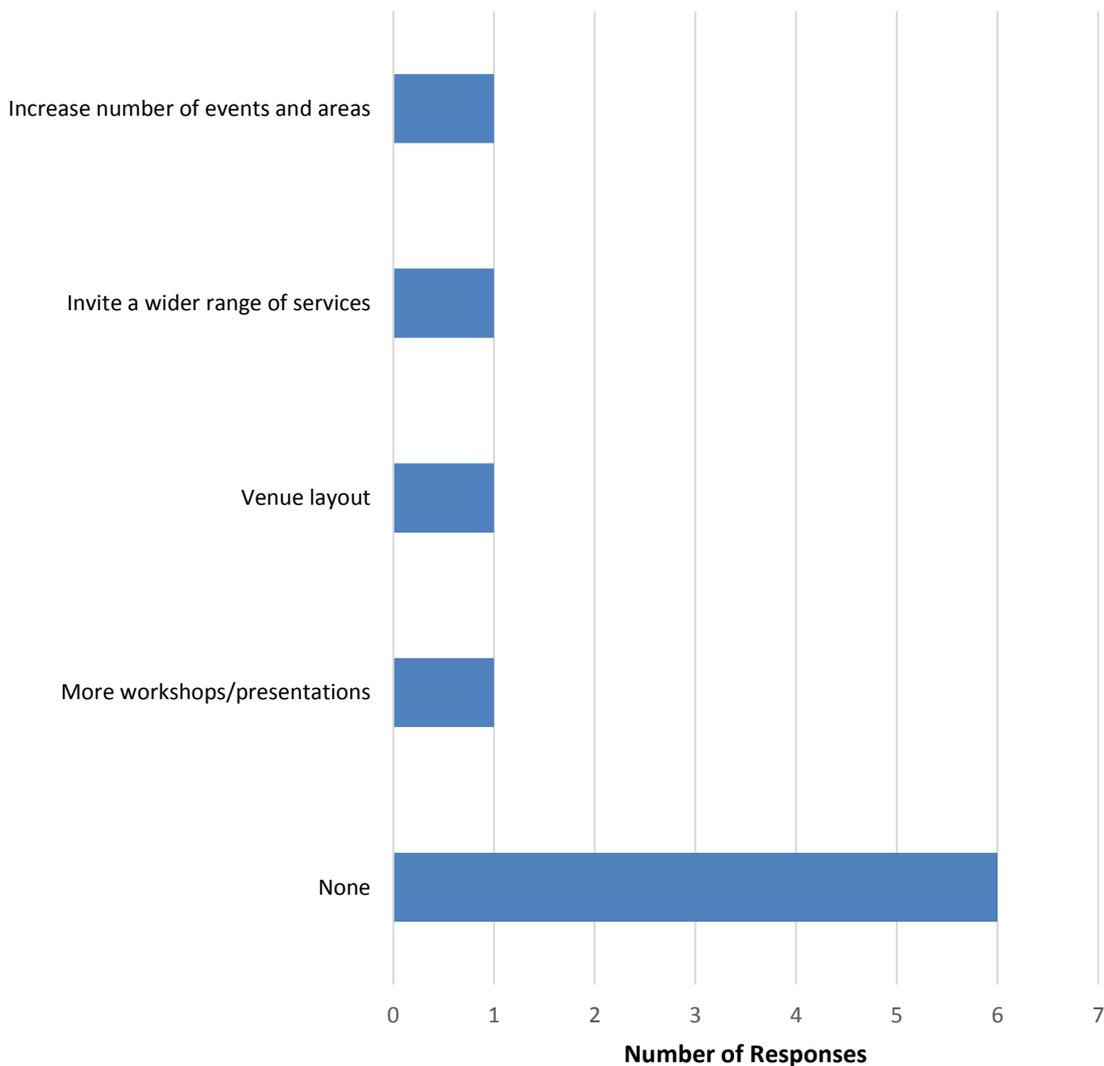

What was the best aspect of the event?

The chart above categorizes the comments made by the attendees for what were the best aspects of the day and the number of responses received from that category. Some comments made by attendees included;
